excerpt from forty two years of bee keeping in new zealand 1874 1916 some reminiscences he also published about the year 1844 a few simple rules for new zealand beekeepers 1 be anxious to increase your stock at first rather than to take a large quantity of honey 2 get well acquainted with your bees and make them

acquainted with you handle them gently and do not blow on them leave them alone when they are cross 3 always in swarming time have a spare hive at hand 4 if you have boxes to pile one on top of the other never disturb the lower box except when after two or three years the combs have grown old and want renewing then late in the autumn when the breeding season is over take the combs away from the lower box instead of the second to take honey 5 take off the cover blow some smoke into the upper box between the bars to drive the bees into the lower box have a table ready with a cloth upon it lift the box on to this and carefully cut out the outside combs stopping directly you come to those which have brood in them return the box with the brood combs undisturbed this may be repeated as often as you see through the window of the hive that the honeycombs are sealed over 6 after the breeding season is over all the boxes except the lower one may be entirely emptied in situations where as at paihia the bees work through the winter 7 keep a stock book regularly and write down immediately anything curious which is observed signed william chas cotton the above rules were no doubt the best that could be adopted by new zealand beekeepers at that time and the system advocated was at least a great advance on that of the sulphur pit method though quite out of date now rule 7 however concerning an apiary register or note book will always hold good the first new zealand bee manual somewhere in the early part of the second half of the last century a useful little manual with the title how to manage the honey bees in new zealand compiled by an old beekeeper and revised by h j hawkins belvedere nursery and david hay montpellier nursery was published by geo t chapman auckland the practical part of this little work covers some 45 pages and was fully up to date at the time it was published the bar hive not the bar frame hive was the most advanced form of hive then in use from which the honeycombs had to be separated from the sides with a long knife when taking honey barframes as we know them now had not then been invented notwithstanding however all that the rev w cotton and a few others had done to awaken an interest in the most humane system of beekeeping in new zealand the old cruel and wasteful sulphur pit method was generally practised down to the year 1880 when things took a turn for the better although the sulphur pit was still largely in evidence until some eight or nine years ago primitive beekeeping as i have already intimated beekeeping in new zealand for very many years after the introduction of the hive bee speaking generally followed the primitive methods in vogue among the cottager class in britain and other parts of europe at that time common boxes with crossed sticks running through them to support the combs were the common form of hives

though a few settlers who had been familiar with and made straw skeps in the old country adopted that style of hive here during the first years of my travelling among our beekeepers as government apiarist i came across several lots of well constructed skeps they were made of twisted straw laced with split supple jack cane and were very neat and cosy looking it grieved the owners very much when they were compelled to do away with them and adopt the more serviceable frame hive a prominent feature of this primitive hive system was the sulphuring of the bees at th

before the reader decides that an apology is necessary for the introduction of another work on bees into the presence of those already before the public it is hoped that he will have the patience to examine the contents of this the writer of the following pages commenced beekeeping in 1828 without any knowledge of the business to assist him save a few directions about hiving smoking them with sulphur c nearly all the information to be had was so mingled with erroneous whims and notions that it required a long experience to separate essential and consistent points it was impossible to procure a work that gave the information necessary for practice from that time to the present no sufficient guide for the inexperienced has appeared european works republished here are of but little value weeks townley miner and others writers of this country within a few years have given us treatises valuable to some extent but have entirely neglected several chapters very important and essential to the beginner keeping bees has been and is now by the majority deemed a hazardous enterprise the ravages of the moth had been so great and loss so frequent that but little attention was given to the subject for a long time mr weeks lost his entire stock three times in fifteen years but soon after the discovery

was promulgated that honey could be taken from a stock without destroying the bees an additional attention was manifest increasing to a rage in many places it seems to be easily understood that profit must attend success in this branch of the farmer s stock inasmuch as the bees work for nothing and find themselves this interest in bees should be encouraged to continue till enough are kept to collect all the honey now wasted which compared with the present collections would be more than a thousand pounds to one but to succeed that is the difficulty some eighteen years since after a propitious season an aged and esteemed friend said to me it is not to be expected that you will have such luck always you must expect they will run out after a time i have always noticed when people have first rate luck for a time that the bees generally take a turn and are gone in a few years
